Subject   Advertiser has no linkage to the Data Server

Description of Problem or Suggestion:

The advertiser in Release A will be able to advertise data server services (e.g., electronic delivery of LIS data), but there will be no ability to invoke the corresponding service directly. While this will be corrected soon after by Release B deliveries, there is still a risk that the initial impression of ECS on the science user community will be negative.

Originator's Recommendation

Hughes should develop a risk assessment approach that determines tirekicker reaction. Then, depending on the reaction, develop a mitigation approach. Options include:

1) If the reaction is not negative, continue with current plans, or

2) If the reaction is negative, and severe, modify Release A to add in representative, invokable linkages between the Advertiser and the Data Server.

3) If the reaction is negative, but less severe, accelerate Release B prototype availability to the larger community.
